SUBJECT INDEX

Absorption coefficients in crystalline materials, measuring, 77
Absorption fine structure (EXAFS): a novel probe for local structure of glassy solids, extended x-ray, 44
Acrylic polymers for optical applications, 2
Applications, acrylic polymers for optical, 2
Applications, survey of refractive data on materials for high-power ultraviolet laser, 95

Behavior of polymers, optical and mechanical, 11
Boundaries in thin film glass lightguides, refracting, 53

Characteristics, chemically vapor-deposited zinc sulfide infrared windows: optical properties and physical, 85
Chemically vapor-deposited zinc sulfide infrared windows: optical properties and physical characteristics, 85
Coefficients in crystalline materials, measuring absorption, 77
Composite designs, erosion resistant infrared windows: thermal, mechanical and optical aspects of, 108
Crystalline materials, measuring absorption coefficients in, 77
Crystalline materials for optics, properties of, 68

Data on materials for high-power ultraviolet laser applications, survey of refractive, 95
Development of fluorophosphate optical glasses, 59

(EXAFS): a novel probe for local structure of glassy solids, extended x-ray absorption fine structure, 44
Erosion resistant infrared windows: thermal, mechanical and optical aspects of composite designs, 108
Extended x-ray absorption fine structure (EXAFS): a novel probe for local structure of glassy solids, 44

Fine structure (EXAFS): a novel probe for local structure of glassy solids, extended x-ray absorption, 44
Fluorophosphate optical glasses, development of, 59

Glass lightguides, refracting boundaries in thin film, 53
Glasses, development of fluorophosphate optical, 59
Glasses, the nature of, 30
Glasses, properties of low cost, high volume, 111
Glassy solids, extended x-ray absorption fine structure (EXAFS): a novel probe for local structure of, 44
Gradient index optics, review of, 38

High-power ultraviolet laser applications, survey of refractive data on materials for, 95
High volume glasses, properties of low cost, 111

Index optics, review of gradient, 38
Infrared windows: optical properties and physical characteristics, chemically vapor-deposited zinc sulfide, 85
Infrared windows: thermal, mechanical and optical aspects of composite designs, erosion resistant, 108

Laser applications, survey of refractive data on materials for high-power ultraviolet, 95
Lightguides, refracting boundaries in thin film glass, 53
Local structure of glassy solids, extended x-ray absorption fine structure (EXAFS): a novel probe for, 44
Low cost, high volume glasses, properties of, 111

Materials for high-power ultraviolet laser applications, survey of refractive data on, 95
Materials, measuring absorption coefficients in crystalline, 77
Materials for optics, properties of crystalline, 68
Materials—a review, mechanical and thermal properties of optical, 104
Measuring absorption coefficients in crystalline materials, 77
Mechanical behavior of polymers, optical and, 11
Mechanical and optical aspects of composite designs, erosion resistant infrared windows: thermal, 108
Mechanical and thermal properties of optical materials—a review, 104

Nature of glasses, the, 30

Optical applications, acrylic polymers for, 2

Optical aspects of composite designs, erosion resistant infrared windows: thermal, mechanical and, 108
Optical glasses, development of fluorophosphate, 59
Optical materials—a review, mechanical and thermal properties of, 104
Optical and mechanical behavior of polymers, 11
Optical properties and physical characteristics, chemically vapor-deposited zinc sulfide infrared windows:, 85
Optics, panel discussion: current status of plastics for, 20
Optics, properties of crystalline materials for, 68
Optics, review of gradient index, 38

Panel discussion: current status of plastics for optics, 20
Physical characteristics, chemically vapor-deposited zinc sulfide infrared windows: optical properties and, 85
Plastics for optics, panel discussion: current status of, 20
Polymers for optical applications, acrylic, 2
Polymers, optical and mechanical behavior of, 11
Probe for local structure of glassy solids, extended x-ray absorption fine structure (EXAFS): a novel, 44
Properties of crystalline materials for optics, 68
Properties of low cost, high volume glasses, 111
Properties of optical materials—a review, mechanical and thermal, 104
Properties and physical characteristics, chemically vapor-deposited zinc sulfide infrared windows: optical, 85

Refracting boundaries in thin film glass lightguides, 53
Refractive data on materials for high-power ultraviolet laser applications, survey of, 95
Review of gradient index optics, 38
Review, mechanical and thermal properties of optical materials—a, 104

Solids, extended x-ray absorption fine structure (EXAFS): a novel probe for local structure of glassy, 44
Structure of glassy solids, extended x-ray absorption fine structure (EXAFS): a novel probe for local, 44
Survey of refractive data on materials for high-power ultraviolet laser applications, 95

Thermal, mechanical and optical aspects of composite designs, erosion resistant infrared windows:, 108
Thermal properties of optical materials—a review, mechanical and, 104
Thin film glass lightguides, refracting boundaries in, 53

Ultraviolet laser applications, survey of refractive data on materials for high-power, 95

Vapor-deposited zinc sulfide infrared windows: optical properties and physical characteristics, chemically, 85

Windows: optical properties and physical characteristics, chemically vapor-deposited zinc sulfide infrared, 85
Windows: thermal, mechanical and optical aspects of composite designs, erosion resistant infrared, 108

X-ray absorption fine structure (EXAFS): a novel probe for local structure of glassy solids, extended, 44

Zinc sulfide infrared windows: optical properties and physical characteristics, chemically vapor-deposited, 85
